

Dear Hiring Manager,

I am writing to express my strong interest in the Software Engineer Co-Op position at LiveRamp. As a Master's student in Software Engineering Systems at Northeastern University with extensive experience in big data processing and distributed systems, I am particularly excited about contributing to LiveRamp's data collaboration platform.

My technical background aligns perfectly with LiveRamp's needs. At Ordex Technology Solutions, I engineered distributed systems using Java and Hadoop for processing petabyte-scale data workflows, and implemented data processing pipelines using Spark and Kubernetes. This experience directly relates to LiveRamp's infrastructure that handles 80+ PBs of data and billions of daily requests. Additionally, at Softvan, I built distributed SQL database systems using SingleStore and developed cloud infrastructure on AWS and GCP platforms, improving query performance by 25%.

Your emphasis on full-stack development and big data engineering resonates with my experience. I've developed full-stack applications using React and Node.js, while also working with TypeScript and Express.js in agile environments. My Real-Time Data Processing and Analytics Platform project demonstrates my ability to handle complex ETL pipelines and optimize data workflows, resulting in a 40% improvement in query performance.

I am particularly drawn to LiveRamp's commitment to data ethics and consumer privacy, as demonstrated in my Fraud Guard project where I developed secure machine learning pipelines for sensitive financial data. My experience as a Teaching Assistant, where I led Java programming tutorials for 50+ students, has honed my ability to collaborate effectively and contribute to team success.

Thank you for considering my application. I am excited about the possibility of contributing to LiveRamp's mission of connecting data in meaningful ways while learning from your talented team.

Best regards,  
Sparsh Sanghavi
